@bookipi/bds have it's own react/react-dom
bookipi-web-account also have react/react-dom

Error

Duplicate React

In order for Hooks to work, the `react` import from your application code needs to resolve to the same module as the `react` import from inside the `react-dom` package.

If these `react` imports resolve to two different exports objects, you will see this warning. This may happen if you **accidentally end up with two copies** of the `react` package.

This problem can also come up when you use `npm link` or an equivalent. In that case, your bundler might “see” two Reacts — one in application folder and one in your library folder. Assuming `myapp` and `mylib` are sibling folders, one possible fix is to run `npm link ../myapp/node_modules/react` from `mylib`. This should make the library use the application’s React copy.

<https://legacy.reactjs.org/warnings/invalid-hook-call-warning.html>

<https://medium.com/bbc-product-technology/solving-the-problem-with-npm-link-and-react-hooks-266c832dd019>

How to fix

yarn link @bookipi/bds

yarn link react

yarn link react-dom

yarn link framer-motion

```
· · echo "Linking BDS.."
· · # Step 1: Register BDS
· · cd "$BDS_PATH"
· · yarn link

· · # Step 2: Register React dependencies to BDS
· · cd "$BOOKIPI_PATH/node_modules/react"
· · yarn link
· · cd "$BOOKIPI_PATH/node_modules/react-dom"
· · yarn link
· · cd "$BOOKIPI_PATH/node_modules/framer-motion"
· · yarn link
· · cd "$BDS_PATH"
· · yarn link react
· · yarn link react-dom
· · yarn link framer-motion

· · # Step 3: Use linked BDS in Bookipi Web App
· · cd "$BOOKIPI_PATH"
· · yarn link @bookipi/bds

· · echo "BDS and React dependencies have been linked successfully."
```
